

## Special Issue

# Best Management Practices for Agricultural Watershed Pollution

### Message from the Guest Editors

Agricultural watershed pollution has severe impacts on water quality and ecosystems, as well as on human health and agricultural productivity. Exploring the best management practices for this issue is crucial for environmental protection and sustainable agricultural development. This Special Issue of *Agriculture* focuses on various management strategies and technologies for agricultural watershed pollution. This includes watershed management, water quality monitoring, chemical fertilizers and antibiotics and pesticide management, livestock management, and non-point pollution source (NPS) control. In addition, it presents the latest research findings and case studies from different regions and countries to discuss international cooperation and policy development for agricultural watershed pollution issues. Through this Special Issue, we hope to share the latest research and knowledge on agricultural watershed management and explore future directions for sustainable agriculture and environmental protection together. All types of articles, such as research, opinions and reviews are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.
