# Agricultural Strategies for Food and Environmental Security

#### Message from the Guest Editor

Food security involves ensuring that there is enough affordable food available for everyone to maintain their health. Environmental security involves ensuring the safety of the environment in which people live in the context of sustainable development. In the whole world. particularly in developing countries like China, extensive agricultural practices have been harmful to both food and environmental security. Thus, scientific and effective agricultural strategies are highly crucial for ensuring food and environmental security. In terms of a single country, agricultural strategies for food and environmental security could be analyzed with a focus on the issues of food policy, agricultural technology, and the application of new-type agricultural technologies (e.g., biotechnology, digital technology). From an international perspective, attention should be paid to the cooperation that promotes synergistic progress in international agricultural development and environmental conservation.

### **About the Journal**

#### Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

#### Editor-in-Chief

#### Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

#### **Author Benefits**

#### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### **Journal Rank:**

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
