Special Issue

Optimization of Livestock Housing Management

Message from the Guest Editors

Livestock housing is a human practice that has existed for millennia. Nowadays, the increasing social demand for sustainable livestock production and supply chains is pushing for improving animal welfare, farm productivity. resources use, waste management, and food security. All those improvements should be achieved without jeopardizing the environmental sustainability and competitiveness of farms in the market. In this framework, a lot of efforts are being paid to develop new technologies and improved farm practices for optimizing livestock housing management while considering the global challenges represented by climate change and increasing demographic trends. This Special Issue aims at collecting impactful research focused on the latest scientific and technical advances in optimizing livestock housing management from a multi- and interdisciplinary point of view. Authors are invited to submit papers covering a broad range of topics, including but not limited to: Indoor environmental control; Resource (e.g., feed, water, and energy) utilization; Waste management; Emission control; Heat stress mitigation; Housing

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
