

Special Issue

Research on the Strategy of Improving the Small Grain Production System

Message from the Guest Editors

Small grains can generate profitable yields for the cash market and farm feeds when soils are properly managed, while the value of the straw harvest is equally crucial for animal production. Consequently, the deeper understanding of small seeds management systems is essential. This Special Issue focuses on methodologies that can improve small grain cropping systems in order to develop a strong transition from traditional methods to innovative and environmentally friendly practices. Research articles will cover numerous crops on a wide range of topics concerning innovative cultural practices, genotypic interactions, precision agriculture, remote sensing, quality improvement, and low-input practices and methodologies, with some emphasis on climate change and energy-saving approaches in all categories of ecosystems. All types of articles, such as original research articles, reviews, and, notes are welcome. Nevertheless, let us demonstrate with this Special Issue that the pursuit of small grain systems is a worthy goal.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
