

Special Issue

Valorization of Agri-Food Waste Bioresources for Sustainable Livestock Feeding

Message from the Guest Editors

The use of bio-waste from agriculture for sustainable livestock feed is an important strategy for tackling environmental problems, optimizing resource use and securing feed supplies. Recent studies have highlighted the nutritional richness of agri-food waste, which has many bioactive compounds that can increase animal productivity and the quality of their products, strengthen disease resistance, promote animal welfare and reduce the environmental footprint associated with methane emissions from ruminants. This Special Issue aims to explore the potential benefits and challenges of using agri-food waste bioresources in animal feed, investigate the way they are incorporated into the diet, and explore innovative approaches to improve their use in animal nutrition and to promote the sustainability of the livestock sector. We welcome interdisciplinary studies from different research areas, including agriculture and animal science, and invite contributions in various formats, including original research and reviews.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
