

Special Issue

Agroforestry Planning

Message from the Guest Editors

Agroforestry by definition integrates two main concepts: the yield of products and environmental benefits. It requires combination and interaction between different species of trees, shrubs, crops, and livestock.

Agroforestry systems become even more diverse when considering the interactions with insects, reptiles, and wildlife species and the interactions between climate, plants, soil, and water. Thus, a wide range of means could/should be used for identifying interactions among multiple social and ecosystem functions and services, and related drivers, processes, and impacts toward a sustainable agroforestry planning. In this context, the Special Issue aims to gather research papers and reviews dealing with tools, methods, case studies, and practical knowledge regarding all agroforestry systems and practices (forest farming, silvopasture, alley cropping, riparian buffers, windbreaks, and urban food forest) that respond to the new challenges and perspectives in agroforestry planning and landscape management.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
