

## Special Issue

# Agroforestry Planning

### Message from the Guest Editors

Agroforestry by definition integrates two main concepts: the yield of products and environmental benefits. It requires combination and interaction between different species of trees, shrubs, crops, and livestock.

Agroforestry systems become even more diverse when considering the interactions with insects, reptiles, and wildlife species and the interactions between climate, plants, soil, and water. Thus, a wide range of means could/should be used for identifying interactions among multiple social and ecosystem functions and services, and related drivers, processes, and impacts toward a sustainable agroforestry planning. In this context, the Special Issue aims to gather research papers and reviews dealing with tools, methods, case studies, and practical knowledge regarding all agroforestry systems and practices (forest farming, silvopasture, alley cropping, riparian buffers, windbreaks, and urban food forest) that respond to the new challenges and perspectives in agroforestry planning and landscape management.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

---

### Editor-in-Chief

Prof. Dr. Les Copeland  
Sydney Institute of Agriculture, School of Life and Environmental  
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
