

## Special Issue

# Characterization, Diversity, and Management Challenges of Grassland Species

### Message from the Guest Editors

Grasslands represent a benefit for agro-ecosystems that Europe is committed to the preservation, protection, and promotion due to their economic, social, cultural, landscape, and environmental roles. These goals can be achieved only through the active and sustainable management of such resources, based on an accurate and careful analysis of grassland-based farming systems, especially the complex and diverse vegetation that characterises grassland environments. Therefore, the interaction among grassland species and human activities warrants in depth study, especially in the context of the current extreme situations of agriculture abandonment and intensification, both affecting grassland environments. This Special Issue focuses on the role that management could play in preserving and enhancing grassland species richness and in the importance of such species within agricultural production systems. For this reason, we welcome high-quality interdisciplinary studies, including agriculture, agro-environmental policies, applied botany, environmental sciences, genetics, grassland restoration and improvement, innovation technologies, landscaping, and soil-plant interactions.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
