

## Special Issue

# Climate Change and Livestock: Impacts, Adaptation, and Mitigation

### Message from the Guest Editor

Global climate change is increasingly affecting agricultural and livestock production, with an overwhelmingly negative effect on animal health and welfare as well as the whole farm systems. The livestock sector must urgently work towards more efficient and sustainable productivity and meet higher standards of animal health and welfare. Agro-livestock sector practices should consider the need for continuous adaptation (resilience) to an ever-changing environment that offers solutions to buffer climate extremes, changing nutrient availability, seasonal forage availability, disease epidemiology, and other new challenges in an environment of heterogeneous conditions. This Special Issue aims to collect the most up-to-date scientific knowledge on the impact of climate change on animal agriculture, with a focus on the specificities of agricultural systems, adaptation strategies of livestock systems that can be implemented to reduce this impact, the impacts of mitigation strategies on animal welfare, as well as identifying opportunities to investigate new adaptation and mitigation strategies.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
