Special Issue

Strategies for Resilient and Sustainable Agri-Food Systems

Message from the Guest Editor

This special Issue is focused on the strategies and policies that support the development of resilient and sustainable agricultural landscapes while addressing the environmental, social, and economic drivers of change affecting global futures in agri-food systems. We invite contributions addressing the reform of global agricultural policies, with a broader focus on policy transformations in various regions designed to promote sustainability in agriculture and food supply chains. Articles are expected to examine resilience strategies within the rural economy that have environmental, economic, and social dimensions. Case studies and comparative analyses from diverse geographical regions depicting innovation that supports the development of resilient and sustainable global agrifood systems are welcome. These topics could include circular agriculture practices for reducing waste and enhancing resource efficiency, digital tools and artificial intelligence use for smart agriculture, community-led agricultural initiatives, bio-based materials for sustainable agricultural inputs, and the impact of consumer choices on agricultural practices.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. Agriculture is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland
