

## Special Issue

# The Influence of Pre-Harvest Factors on the Product Quality of Field Crops

### Message from the Guest Editors

The effects of pre-harvest factors on the ultimate quality of harvested products are often overlooked and underestimated, although a wide spectrum of pre-harvest factors, including environmental conditions and field management practices, directly or indirectly impacts the qualitative traits of field crops produce. Particularly seasonal climatic conditions, soil fertility, variety selection, fertilization, irrigation, pest control, and harvest time play a crucial role in determining post-harvest quality attributes (such as color, flavor, texture, and nutritional value of the harvested product), deterioration, and, subsequently, consumers' decision to purchase the product in the marketplace.

This Special Issue focuses on the role of pre-harvest factors in determining the product quality of field crops, with a major emphasis on the best agronomic practices, and enabling tools for obtaining products with high and stable quality. This issue will lend to highly interdisciplinary studies embracing disciplines from agriculture and biology, to chemistry and human nutrition. All types of articles, such as original research, opinions, and reviews are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
