

Special Issue

Genetics and Breeding of Soybean

Message from the Guest Editor

Soybean is grown worldwide for its protein, oil and other useful seed components. Demand of soybean has been increasing dramatically during last 20 years. The genomic data and tools, and genetics of soybean for cultivar development are rapidly improving, especially in developed countries. To increase soybean production in order to fulfil demand worldwide, genetic improvements and development of breeding techniques are necessary. This Special Issue on the “Genetics and Breeding for Better Quality and Yield in Soybean” includes papers on both basic and applied research highlighting all aspects of the genetics, breeding, biotechnology, germplasm enhancement, and any new theories which can improve soybean quality and yield. Welcome manuscripts both reviews and original articles which have impact of following keywords:

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
