# Advanced Studies in Improving the Nutritional Status of Forage Crops for Better Livestock Productivity

### Message from the Guest Editors

Forage crops refer to plants, usually grasses (Poaceae) or herbaceous legumes (Fabaceae), consumed by animals, particularly livestock. The nutritional status of forage plants depends on the concentration and proportion of carbohydrates, proteins and lipids. The composition of these organic nutrients determines the digestibility of each plant, which, along with minerals and vitamins, provides the amount of energy the animal can obtain. The quality of feed used in livestock nutrition is very important, as it determines not only the animal's performance but also the quality of milk and dairy products and beef. Forage crop quality is determined by genetic constitution and agronomic practices (irrigation management, harvesting stage, the number of cuttings etc.). In addition, climatic changes and abiotic stress factors can also affect forage quality. Nutrient application rate also influence the quality aspect of forage crops and so does preservation technology involving inherent nutrient losses. In this Special Issue, we are looking for publications that can bring together different aspects concerning the improvement of the nutritional status of forage crops.

### Guest Editors

Dr. Barbara Wróbel

Institute of Technology and Life Sciences—National Research Institute, Falenty, 3 Hrabaska Avenue, 05-090 Raszyn, Poland

Dr. Waldemar Zielewicz

Department of Grassland and Natural Landscape Sciences, Poznań University of Life Sciences, Dojazd 11, 60-632 Poznań, Poland

### Deadline for manuscript submissions

closed (20 February 2025)

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
