Advanced Studies in Improving the Nutritional Status of Forage Crops for Better Livestock Productivity

Message from the Guest Editors

Forage crops refer to plants, usually grasses (Poaceae) or herbaceous legumes (Fabaceae), consumed by animals, particularly livestock. The nutritional status of forage plants depends on the concentration and proportion of carbohydrates, proteins and lipids. The composition of these organic nutrients determines the digestibility of each plant, which, along with minerals and vitamins, provides the amount of energy the animal can obtain. The quality of feed used in livestock nutrition is very important, as it determines not only the animal's performance but also the quality of milk and dairy products and beef. Forage crop quality is determined by genetic constitution and agronomic practices (irrigation management, harvesting stage, the number of cuttings etc.). In addition, climatic changes and abiotic stress factors can also affect forage quality. Nutrient application rate also influence the quality aspect of forage crops and so does preservation technology involving inherent nutrient losses. In this Special Issue, we are looking for publications that can bring together different aspects concerning the improvement of the nutritional status of forage crops.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
