Soil Contamination and the Strategies to Reduce Pollutant Accumulation in Crops

Message from the Guest Editor

The continuous use of contaminated agricultural soil has given rise to pollution in cereal crops, fruits, vegetables, and other commercially important plants in recent years. Therefore, it is urgent to minimize the pollutant accumulation in crops through soil remediation, pollution-safe cultivar breeding, microbial agents, and other potential strategies. For this Special Issue, we cordially welcome scientific contributions aimed at food safety by reducing pollutant accumulation in crops. Both high-quality original research papers and comprehensive reviews are welcome. The areas of interest encompassed by this Special Issue include, but are not limited to, the following:

- Pollutant migration and transformation in soil ecosystems;
- Phytoremediation, microbial agents, cropping patterns, and other approaches to reduce crop contamination;
- The pollutant behavior in crops and hyperaccumulator plants;
- Microbial remediation and microbial response to the soil contamination;
- The plant physiology and molecular mechanism responding to the pollutant exposure;
- Environmental policy to manage the accumulation of pollutants in crops.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
