

Special Issue

Strategies and Mechanisms for Enhancing Food Supply Stability

Message from the Guest Editor

Ensuring the stability of food supply has become a critical priority for global food security, particularly in light of contemporary challenges such as resource scarcity, climate change, geopolitical tensions, pandemics, and market volatility.

Our Special Issue invites the submission of original and innovative research that addresses the multifaceted issue of food security and related implications, with a particular emphasis on its interconnection with food supply stability.

We welcome original research articles, review papers, and case studies on topics including, but not limited to, the following:

- How primary production of food can support the ensuring of food security and food stability.
 - How food processing can play a relevant role in enhancing food security.
 - How the logistics and distribution sector can ensure long-term food access.
 - How to inform and educate consumers to adopt sustainable lifestyles in order to prevent food waste.
- Submissions from a wide range of geographical contexts are strongly encouraged, in recognition of the global scope of these challenges and the importance of regional specificities in shaping local responses.
