Image Analysis Techniques in Agriculture

Message from the Guest Editors

In modern agriculture, the main emphasis is placed on the development of precise tools supporting all activities related to food production. Increasing attention is now being paid not only to the quantity but also, and above all, to the quality of agricultural products, as well as to waste and its characteristics. Computer image analysis, which in many respects supports precision farming, is becoming a widely used tool. It should be mentioned that the quality of individual products, such as cereals, vegetables, and fruits, should be assessed, but it is also possible to assess the condition of a field and plantation. These tools have an advisory function and in many cases are able to prevent losses to the agricultural producer. The 21st century is a century of information, including information encoded in graphic form, most often in the form of a digital image. Appropriate acquisition of material, and then determination of characteristics and production of methods that will directly or indirectly support the agricultural production, e.g., in the aspect of plant protection, etc. belongs among the broad interests of modern Agriculture 4.0.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
