Regenerative Livestock Systems: Enhancing Nutrient Density and Ecosystem Health Through Holistic Practices

Message from the Guest Editor

Regenerative livestock systems are gaining global attention as transformative approaches to animal agriculture, emphasizing ecological resilience, animal welfare, and nutrient-rich food production. Unlike conventional methods, these systems integrate holistic grazing, soil restoration, biodiversity enhancement, and climate adaptation strategies to improve both ecosystem health and food quality.

This Special Issue aims to explore scientific advancements and practical applications in regenerative livestock farming. Key topics include soil microbiome enrichment, carbon sequestration in pasture-based systems, the impact of diverse forages on meat and dairy nutrient density, and animal welfare in regenerative models. Additionally, we welcome studies on policy frameworks, economic viability, and the role of regenerative livestock in climate mitigation.

We seek contributions from researchers, practitioners, and industry experts providing empirical data, case studies, or theoretical insights into how regenerative approaches influence animal health, product quality, and environmental sustainability.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
