

Special Issue

Sustainable Production of Horticultural Crops

Message from the Guest Editors

Sustainable agricultural production is expected to effectively manage natural resources to produce a sufficient amount of nutritionally valuable food, while maximizing the preservation of biodiversity and environmental quality and ensuring economic sustainability. However, in addition to ensuring a balance in food production and environmental protection, many challenges of agricultural production are also related to increasingly pronounced climate change. Sustainable and innovative agricultural practices in the production of vegetables, fruits, grapes, ornamental, aromatic, and medicinal plants can increase resource use efficiency, improve adaptability and abiotic/biotic stress tolerance, and enhance soil biodiversity while reducing production inputs. This Special Issue will cover a various research manuscripts aimed at highlighting various sustainable practices in the production of different horticultural crops and the positive impact on overall sustainability. Therefore, you are welcome to share your scientific achievements and contribute to our common goal of sustainable development of the agricultural system.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
