

## Special Issue

# Biochemistry and Molecular Biology of Lipid Metabolism in Oil Crops

### Message from the Guest Editor

Acyl lipids, mainly in the form of triacylglycerol, accumulate in oil plants as an important energy store to fuel seed germination and seedling growth or to attract animals that serve to disseminate the seeds in the case of oil fruits. These plant triacylglycerols, commonly known as vegetable oils, supply an important quantity of dietary calories to the developed world. Furthermore, the world demand for vegetable oils is increasingly rapidly, not only for their use in food, but also as fuel and as renewable biomaterials in other applications. Knowledge of the underlying molecular biology and biochemistry of the metabolism of plant storage compounds is essential to increase the yield and alter the fatty acid composition of vegetable oils as well as to enable the development of new and more productive oil crops. Based on this challenge, this Special Issue focuses on the study of lipid metabolism from a molecular and biochemical point of view with two main objectives: first, significant increases in the plant oil production capacity; second, improvements in the quality of vegetable oils by modifying their composition.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
