The Human Dimension in Animal Health Programs: Understanding Behavior and Practices

Message from the Guest Editor

Human behavior directly influences animal health, making humans responsible for providing care, implementing preventive measures, and managing livestock systems. Recognizing the importance of human behavior in animal health programs can lead to targeted education, training, and increased awareness of proper animal husbandry. Effective communication and collaboration among stakeholders such as farmers, veterinarians, policymakers, and consumers are vital for success. Considering perspectives, needs, and concerns of involved parties allows programs to be tailored to address specific challenges. Understanding and addressing human behavior, fostering collaboration among stakeholders, and considering public health implications are essential for effective animal health promotion and societal well-being. This Special Issue explores studies assessing the human dimension, including practices associated with animal health programs, to enhance effectiveness and improve community health. We encourage observational studies addressing behaviors, knowledge, and opinions of stakeholders.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
