Special Issue

Crop Seed Dormancy, Germination and Vigour Analysis and Seed Proteomics

Message from the Guest Editors

"Civilisation depends for continuance on the seed saved each year for planting the next." This evergreen statement of J.F. Cox focuses on the importance of seed propagation, and on the value of crop seed. The Special Issue is intended to cover a broad spectrum within seed production. Unlike conventional seed propagation studies, this volume would highlight problem areas of seed production. The first of them is seed dormancy that is rather diverse according to crop species as well as management techniques. The other field of the present volume is dedicated to viability including all genetic and agronomic factors of germination and vigour. A novel field of seed science is represented by proteomics and other biochemical characteristics that may influence the success of seed production and propagation. Finally abiotic and biotic factors of seed storage and postharvest manipulations are to be discussed.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
