Nutritional Quality of Agricultural Products under Climate Change Scenarios

Message from the Guest Editor

In August 2019, the Intergovernmental Panel on Climate Change (IPCC) elaborated a special report on climate change, desertification, land degradation, sustainable land management, food security, and greenhouse gas fluxes in terrestrial ecosystems

(<https://www.ipcc.ch/report/srccl/>). The executive summary of Chapter 5, focused on food security, affirms that climate change is already affecting food security, mainly due to increasing temperatures, changes in the precipitation patterns, and more frequent extreme environmental events being the future perspectives pessimistic for food security. Moreover, increasing atmospheric CO₂ can change plant stoichiometry, reduce the ratio between the nutritional and the caloric value of crops, and increase the micronutrient (zinc, copper or iron) malnutrition problem in the human diet. In addition, the impact of pests and diseases on food safety under scenarios of climate change should be taken into account due to the chemical and microbiological risks derived from the application of chemicals and from the accumulation of mycotoxins in the edible parts of crops.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
