

Special Issue

Efficient Use of Irrigation and Fertilizer to Increase Crop Yield

Message from the Guest Editor

In order to maximize output and simultaneously safeguard the environment, it is important to promote research and communicate the findings in the area of crop selection for each appropriate region, combining the efficient use of irrigation and fertilization. This Special Issue provides an assessment of more effective techniques of irrigation, fertilizer, and/or crop variety (or even novel crops previously seen in nature) to enhance performance while protecting the environment. Studies that will be proposed in this Special Issue include new crop varieties, more effective irrigation and fertilization practices, and new types of fertilizers. Numerous types of crops will be covered in research publications, such as cereals, legumes, industrial plants, vegetables, aromatic-medicinal plants, as well as field crops from different managed ecosystems. Original research, viewpoints, and reviews are all welcome types of articles.

Guest Editor

Dr. Kyriakos Giannoulis

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
