Special Issue

Impact of Agricultural Practices on the Environment

Message from the Guest Editor

From the extensive use of agricultural machinery and the utilization of technologies like selective breeding and biofortification to the application of different agrochemicals, all these practices directly affect the environment. Not only soil is affected, but indeed all environmental compartments, considering the fact that agro-chemicals are dispersed in the air and end up in different water bodies. Improvements in food production are necessary, but it is also important to be aware of their effects on the environment in order to be able to reduce the harmful consequences. The focus of this Special Issue is on the effects of different agricultural practices on the environment. This broad topic involves the investigation of effects of mechanization, selective breeding and improvement of the nutritional content of crops, the application of mineral fertilizers and pesticides, and any other kind of agricultural practice on the affected biota. Studies from diverse research fields are welcomed, and both original research articles and reviews are accepted.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
