

## Special Issue

# Sensory Properties Analysis for Quality Evaluation of Agricultural Product

### Message from the Guest Editor

Sensory characteristics are an essential element in determining the quality of agricultural products, making their analysis fundamental to evaluating the latter. Sensory analysis has become very important in the food industry due to its increased use of groups of selected tasters (panels) who are able to objectively describe the organoleptic characteristics of a product and evaluate their intensity, both in absolute terms and in comparison with other similar products. A panel's role can also be to anticipate consumers' opinion by expressing hedonic and, therefore, subjective opinions in order to predict a product's acceptance on the market. These panels are used in the development of a new product, to improve one already on the market, verify the effects of a change in production, or control a product's quality and verify its stability and shelf life. This Special Issue focuses on assessing the quality of agricultural products using sensory analysis. For this reason, research and review articles on chemical, biological, nutritional, and food technology are welcome and will certainly help readers gain more clarity on the topics covered.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
