

## Special Issue

# Soil Quality and Crop Nutrition

### Message from the Guest Editors

Soil quality has been defined as the capacity of a soil to sustain biological productivity, maintain or enhance environmental quality, and promote plant and animal health. Besides to an inherent component, which is quite static since it is based upon those soil properties basically immutable (e.g. slope, texture, mineralogy), soil quality also deals with a dynamic component including some specific soil attributes (e.g. soil organic matter content, soil microbial biomass and composition, soil aggregation, readily mineralizable C and N) that are subjected to changes over relatively short time periods. These changes are driven also by land-use and agronomic management (e.g. soil tillage, crop rotation, fertilization, etc.).

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
