

Special Issue

Phytochemical Changes in Vegetables and Fruits During Post-Harvest Storage and Processing

Message from the Guest Editor

From its inception, agriculture has been linked to the need for available quantities of foodstuffs under specific climatic, natural, agrotechnical, and economic conditions, and, on the other hand, to the quality control devices produced by agricultural parents. This Special Issue will focus on the development of methods for shaping the quality of fruits and vegetables at every stage of their growth, beginning with the use of genetic engineering methods in seed preparation to control the potential and yield of plants, their development, and harvest, as well as providing means and methods for conscious control during periods of limited disposal. The best practices of currently planned experiments, including those concerning the quality of fruits and vegetables as products in agri-food processing, may lie in their versatility, multifaceted nature, and interdisciplinarity. Another advantage of these experiments is their analytical application, which utilizes high-quality sources, precision, and comprehensive results. In addition to studies expanding experimental research, this Special Issue also seeks reviews, opinions, and summary studies.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
