Special Issue

Genetic Improvement of Millets for Food, Nutrition, Energy, and Environment

Message from the Guest Editor

Millets were once a part of our regular diet, but, consequently, have become marginally cultivated crops, confined to a particular region, race, or locality. Millets, being reared in environments with minimal resources, retain their potential to withstand heat, drought, pathogen and pest infection, and poor soil nutrition. They also have the answers to globally prevalent energy and environmental issues. Given this, research is being carried out on millets to identify the genetic determinants underlying their key traits related to food, nutrition, energy, and environment, and subsequently improving these traits using genetics and genomics approaches. This Special Issue aims to bring the millet research community together by publishing their research outcomes focusing on increasing millets' adaptability and tolerance to environmental stresses, nutritional potential, bioenergy, and biofuel traits. Comprehensive reviews providing insights into the above aspects are also welcome.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
