Special Issue

Application of Sensor Technologies in Livestock Farming

Message from the Guest Editors

This Special Issue explores the role of sensor technologies, e.g., machine vision, in transforming the livestock farming industry. This includes the advancements, challenges, and potential applications of sensor technologies in livestock farming. In addition, this Special Issue focuses on various aspects of sensor technologies, such as data processing and decisionmaking algorithms, showcasing their effectiveness in livestock management. The articles will explore how sensor technologies can facilitate the automated monitoring of animal behaviour, disease detection, and identification of individual animals for tracking and sorting purposes. Furthermore, this issue also examines the integration of machine vision with other sensor technologies, such as infrared thermography and RFID, to enhance the overall efficiency and accuracy of data collection. This Special Issue also addresses challenges associated with implementing sensor technologies in livestock farming, including data management, privacy, and cost-effectiveness.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
