Special Issue

Biosecurity Innovations for Pest Management in Agricultural Products

Message from the Guest Editors

This Special Issue emphasizes the new biosecurity innovations in pest management for agricultural products. Biosecurity is one of the important elements of sustainable agricultural practices that prevent the introduction and spread of pests and diseases dangerous to food security and environmental health. The goal of this Special Issue is to highlight the newest scientific developments and practical solutions supporting efficient and environmentally friendly pest management strategies in the protection of agricultural products. We invite contributions that discuss novel technologies and methodologies for pest detection, prevention, and control, primarily targeting the reducing reliance on toxic chemical pesticides. We are keen on research involving low-toxicity or nonchemical pest control methods, quarantine treatments, integrated pest management (IPM), biological control agents, and the incorporation of sensor technologies and IoT systems for real-time monitoring and decision making. We also welcome papers on ways to improve pest resistance using genetic innovations toward promoting sustainable agriculture.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
