Recent Advances in Agronomic Measures for High-Yield Cultivation of Maize

Message from the Guest Editor

With the rapid increase in global population, food shortages have become a major area of concern for all countries. In the case of a shortage of arable land, increasing the yield of crops per unit area is an important way to solve the world's food problems. Maize (*Zea mays* L.) is one of the main staple crops and has the highest grain yield per unit area in the world. In addition, maize has a high yield potential. Therefore, increasing the yield of maize through appropriate cultivation and agronomic techniques is of great significance to solving the world's food shortage problem. This Special Issue focuses on the recent advances in agronomic measures for the high-yield cultivation of maize. Original research articles about these topics will be accepted.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
