Crop Disease Dynamics

Message from the Guest Editor

Dynamic interactions of plant pathogens, hosts, and the environment change over time and space. The changes happen on the environment (e.g., climate, weather, chemical application), host (e.g., introduction of new resistant lines, cultural practices), or pathogens (e.g., emerging pathogens, fungicide resistance) can further change the relationship among them. Therefore, in order to effectively manage crop diseases, it is critical for researchers and growers to understand the mechanism of this dynamic relationships. The rationale of this Special Issue is to have a better understanding of the cause and/or effect of the crop disease dynamics so that we can develop environmentally and economically sound and effective plant disease management strategies.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
