Germplasm Resources Exploration and Genetic Breeding of Crops

Message from the Guest Editors

Environmental changes force plant breeders to develop new and improved cultivars with better adaptability to biotic and abiotic stresses. The genetic diversity of crops, gathered and protected from extinction in genebanks worldwide, is essential for dealing with changing and more demanding environments. Breeding efforts are strongly supported by the broad exploitation of germplasm resources. However, the efficient utilization of available crop diversity in breeding programs depends on its precise and comprehensive characterization. This can be achieved through the intensive phenotyping and genotyping of genebank collections, current and historic cultivars, landraces, and breeding materials using advanced molecular, biochemical, and physiological tools and methods. Contributions in the form of novel research, reviews, and communications covering all aspects of the characterization of crop genetic resources and their applications in breeding will be considered. Papers concerning genetics research and molecular breeding, including gene/QTL detection or gene functional analysis in crops, will be welcome as well.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
