Safety and Efficacy of Feed Additives in Animal Production

Message from the Guest Editors

Due to the challenge of reducing the environmental impact of animal production as well as maintaining animal health and sustainable livestock productivity, it is necessary to change the feeding strategy of livestock. Improving nutrient digestion and absorption by feed supplementation can increase micronutrient bioavailability, provide safe and functional foods, as well as reduce environmental pollution from animal production. The scope of the present Special Issue is to publish high-quality papers concerning various sources of nutritional feed additives using in-farm animal nutrition, and to investigate their effects on livestock health and production together with environmental pollution. Therefore, we invite you to submit, in this Special Issue, your recent findings, regarding feed supplementation with nutritional feed additives, nutraceuticals or alternative feed byproducts, the effect of feed supplementation on animal growth, health and production, gut microbiota and food safety, and environmental impact.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
