# Special Issue

# Breeding, Genetics, and Genomics of Fruit Crops

# Message from the Guest Editor

The fruit tree crop field is experiencing radical changes thanks to both technical and genetic innovations that are contributing to the production of fruits with improved characteristics. The global demand for fruit tree crops with such improved agronomical and fruit quality traits is increasing rapidly every year. However, genetic improvement by traditional breeding is slow and unpredictable due to the long juvenile phase, high degree of heterozygosity, and polygenic regulation of most agronomical traits. Traditional breeding increases its efficiency when supported by genetic and molecular information using marker-assisted selection (MAS). Advances in DNA-derived data and innovative phenotyping are bridging the genotype-to-phenotype gap in fruit tree crop selection. Developing new genomic-based tools using next-generation sequencing (NGS), high-throughput genotyping technologies, and new breeding techniques (NBT) has expedited the chance for achieving important improved traits. This Special Issue welcomes innovative research focusing on the molecular markers helping breeders toward the definition of novel ideotypes characterized by superior agronomical traits.

# **About the Journal**

# Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. Agriculture is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

# Editor-in-Chief

### Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

# **Author Benefits**

# **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

# **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

# **Journal Rank:**

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
