Greenhouse Technology and Management

Message from the Guest Editor

Greenhouse technology has evolved from being a niche cultivation system for specialty crops to becoming the backbone of intensive agriculture both in developed economies and in emerging markets. The effects of pre-harvest factors on the ultimate quality of harvested products are often overlooked and underestimated, although a wide spectrum of pre-harvest factors. Particularly, seasonal climatic conditions, soil fertility, variety selection, fertilization, irrigation, pest control, and harvest time play a crucial role in determining post-harvest quality attributes, deterioration, and, subsequently, consumers' decision to purchase the product in the marketplace. This Special Issue focuses on the role of pre-harvest factors in determining the product quality of field crops, with a major emphasis on the best agronomic practices, and enabling tools for obtaining products with high and stable quality. This issue will publish highly interdisciplinary studies embracing disciplines from agriculture and biology, to chemistry and human nutrition.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
