Special Issue

Insect Ecology and Pest Management in Agriculture

Message from the Guest Editor

Among all agricultural pests, insects in particular cause serious damage to crops and trees due to their huge number of individuals and their ability to tolerate or adapt to stresses. To establish sustainable agricultural systems, it is essential to better understand how insects tolerate or adapt to adverse conditions, as well as when and why insects will emerge. To meet the demand of high-quality agricultural products, we should use environmentally friendly pest-management methods. This Special Issue welcomes research articles and reviews on insect autecology, insect population dynamics and forecasting, plant-insect natural enemy interactions, insect community and landscape ecology, as well as environmentally friendly pest-management techniques.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
