

## Special Issue

# Effects of Dietary Interventions on Poultry Production

### Message from the Guest Editor

In recent years, poultry farming has been one of the fastest developing branches of animal production. The main drive for developing broiler chicken production is the growing demand for poultry meat, which is mainly due to its dietetic values and great number of culinary applications, supported by its outstanding physical and chemical properties and sensory value. Those expectations are being met thanks to the appropriate choice of feed raw materials in poultry diets. It is necessary to promote research and the dissemination of results in the field of the performance, slaughter value and product quality of poultry which are modified due to dietary interventions. This Special Issue focuses on the role that dietary interventions play in poultry production (broiler chickens, turkeys, laying hens, etc.). Original research articles and reviews are accepted.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
