

## Special Issue

# High Yield Cultivation, Growth and Development Mechanism of Wheat

### Message from the Guest Editor

With the world's population increase, the demand for food is increasing continuously. Wheat is one of the most important food crops in the world, and the grain yield of that notably affects world food security. Meeting the growing demand of consumers for wheat products is one of the most imperative challenges of modern agriculture. In this view, how to adopt suitable cultivation measures to improve wheat grain yield becomes increasingly important. Therefore, a deeper understanding on the physiological mechanism of wheat growth and development, as well as the physiological basis of high-yield cultivation measures on wheat yield improvement, is crucial to analyze the mechanism of wheat yield improvement and select cultivation techniques that are beneficial to yield improvement. This Special Issue focuses on high yield cultivation and growth and development mechanism of wheat. This Special Issue of *Agriculture* will cover interdisciplinary research in agriculture, plant physiology, and biochemistry. All types of articles, such as original research, opinions, and reviews, are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
