Evaluation of New Technological Solutions in Agriculture

Message from the Guest Editors

Contemporary agricultural systems are now facing an amazing availability of new technologies that are derived mostly from the Information and Communication Technology sector. At the same time, global threats such as climate change, soil and water pollution, economic crisis, and social inequalities are undermining the traditional agricultural systems. In this scenario, the evaluation of any novel technology in the existing agricultural systems seems to be a crucial point of understanding and knowledge. Both the development of a technology (largely driven by a need to address a problem) and its adoption need to be carefully evaluated. In particular, the adoption of a technology is linked with complex drivers of agricultural systems, including social, political, and economic. Therefore, evaluation shall include the assessment, comparison, appraisal, or measurement of sustainability, economic aspects, and efficacy of the studied or adopted innovative solution. About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Dr. Mathew G. Pelletier

Retired Scientist from Agricultural Research Service, United States
Department of Agriculture, Lubbock, TX, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, FSTA, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Agricultural Engineering) / CiteScore - Q1 (Horticulture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.6 days after submission; acceptance to publication is undertaken in 5.4 days (median values for papers published in this journal in the first half of 2025).
