

## Special Issue

# Novel Approaches for Sensing Techniques

### Message from the Guest Editors

In recent years, innovative sensing techniques have been adopted as methods to detect plant responses. Recent efforts in novel approaches have focused on enhancing the techniques and automating the process using statistics, data analysis, image processing, and artificial intelligence. Agricultural automation engineering is an industry-wide solution for expanded global crop production. Sensing technology is a prominent factor in agricultural engineering progress because it allows for greater efficiency, reliability, and speed in a range of tasks related to agriculture from planting through processing. We proudly invite the community of scholars to submit their research from across the spectrum of novel sensing techniques in the area of agriculture, plant science, and breeding. Contributions could include but are not limited to high-throughput phenotyping, digital agriculture, data science, machine learning, precision irrigation, plant physiology, water management, precision fertilization, robotics, precision agriculture, smart farming, remote or proximal sensing, machine vision, robotics in agriculture, Internet of Things, and smart farming.

# About the Journal

## Message from the Editor-in-Chief

*AgriEngineering* (ISSN 2624-7402) is an international open access, open-source, and cross-disciplinary scientific journal on the engineering science of agricultural and horticultural production. Our aim is to encourage scientists to publish their experimental and theoretical research, along with the full set of schematics, source-code, and mechanical design models leading to accelerated and rapid dissemination of leading-edge technologies emerging in agricultural, environmental, and agronomic engineering. *AgriEngineering* publishes articles, technical notes, reviews, commentaries, and case/field reports, as well as Special Issues on particular subjects.

## Author Benefits

### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, FSTA, AGRIS, CABIplus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Agricultural Engineering) / CiteScore - Q1 (Horticulture)

### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22 days after submission; acceptance to publication is undertaken in 6.3 days (median values for papers published in this journal in the second half of 2025).
