Hemp grows up: Opportunities and challenges ahead for commercial-scale hemp in world cropping systems

This Special Issue is devoted to taking what has been learned, particularly in the past five years, from the global explosion in industrial hemp research plots and extending that to a larger scale, knowing that there are other crops that hemp is either rotated in with or replaces outright. Papers are invited with focus on the agronomy of grain and fiber hemp crops. Themes of particular interest are:

- Hemp cultivation methods—soil prep, planting techniques, pest management;
- Optimizing hemp yields and genetic expression through agronomic practices;
- Supply chain considerations—harvest, processing, distribution;
- Regional suitability and climate considerations for large-scale hemp production
- Scaling considerations—transitioning from small research plots to commercial crop production.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
