Deadline for manuscript  
submissions:

**closed (1 March 2020)**

### Message from the Guest Editor

Dear colleagues,

Mycotoxigenic fungal outbreaks and contamination with multiple (>250) mycotoxins are a chronic threat for crop yield and safety, human and animal health worldwide. Hence, regulatory authorities impose strict standards for improving control strategies, whereas agriculture practices are implementing high quality control systems. Therefore, the food security researchers and crop growers are seeking eco-friendly biocontrol solutions to minimize mycotoxins in grain infected by fungi or molds and to reduce chemical pesticide inputs. However, there is an important gap in understanding of the biocontrol agents and their critical traits for more efficient protection of crops and improved decontamination and/or detoxification of mycotoxins from contaminated grains. The emphasis of this Special Issue of the Agronomy journal is put on vital biocontrol aspects of mycotoxigenic fungal diseases and their mycotoxins in various crops, production systems and geographies.

Prof. Dr. Vladimir Vujanovic

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
