Deadline for manuscript  
submissions:

**closed (31 December 2020)**

### Message from the Guest Editors

Crop nutrient use efficiency (NUE) is a complex trait that depends not only on the ability of the plants to take up nutrients from the soil but also on their capacity to use nutrients to promote yield. Improvement of our knowledge on crop NUE will also be brought about by a better understanding of root physiological responses to different soil conditions, with particular regard to the effects of nutrient availability on root architecture and root–microbe interactions inside the soil.

Alternative strategies to improve crop NUE are based on the development of precision fertilization techniques that specifically require both the real-time and remote monitoring of crop nutritional status. In this regard, the use of satellite-driven images, as well as of plant bioindicators, will provide novel opportunities to develop site-specific fertilization techniques matching nutrient supply with crop requirements and simultaneously minimizing nutrient losses from the fields.

This Special Issue aims at highlighting novel perspectives in crop mineral nutrition. Contributions are invited from scientists working at the molecular, genetic, physiological, agronomic, and ecological levels.

## **Message from the Editor-in-Chief**

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
