Message from the Guest Editor

Dear Colleagues,

As part of evolution, domestication has enabled wild plants and animals to be cultivated and consumed. This domestication occurred spontaneously or by humans, to adapt to a new environment. As a result, plants have developed new traits, such as bigger branches, bigger and sweeter fruits, etc., in which many transcription factors have a major role. When, where, and how most horticultural crops are domesticated today is being elucidated by the combination of different disciplines: archaeobotany, breeding, biochemistry, bioinformatics, physiology, molecular biology, etc.

We welcome submissions on topics including (but not limited to): (1) domestication of plants; (2) transcription factors involved in important traits, such as dormancy, flowering time, fruit development; and (3) decision support tools and modeling.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Agronomy and Crop Science*)
