submissions:

20 February 2021

Message from the Guest Editors

The application of herbicides to control their weeds is being eroded. This is because: (1) increasingly tighter restrictions are being imposed on the use of herbicides; and (2) weeds are evolving a resistance to many of the available actives. It is, therefore, more important than ever to develop new effective methods for weed-control that slow the evolution of resistance and avoid the negative environmental impacts of herbicides. Here, models have an important role to play. Models can help us to understand mechanisms that are important for the control of weeds. They allow us to test scenarios that are not feasible to test through experiments, and we can use them to determine optimal management strategies. In this Special Issue, we invite submissions on the use of models to address the challenge of improving weed management in agriculture. Topics of interest include, but are not limited to:

weed management in the developing world;
integrated approaches to weed management;
managing herbicide resistance;
managing weeds to support ecosystem improvement;
and
optimized weed management strategies.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: Indexed in the Science Citation Index Expanded (SCIE) - Web of Science from Vol. 5 (2015). Covered in **Scopus** (2019 CiteScore: 1.8) and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
