Message from the Guest Editors

Dear Colleagues,

This Special Issue is focused on “Potential Strategies for Adding Value to Mediterranean and Exotic Fruit and Vegetable Byproducts”. Around a third of all food produced is lost or wasted at some point in the food chain. The losses vary quite a bit, reaching up to 50% in the case of fruits and vegetables (including tubers, roots, and oilseed crops). Taking the abovementioned into account, the detected problems must be solved through specific measures such as: i) extending the shelf life of fresh and minimally processed Mediterranean and exotic agricultural productions, assuring food safety and optimum commercial, organoleptic, and nutritional quality; ii) developing new presentations; iii) revaluing the agricultural industry byproducts; and iv) developing the bio-economy and circular economy through the use of organic solid waste, including waste and agricultural byproducts. The aim of this Special Issue is to promote the revalorization of Mediterranean and exotic vegetable and fruit byproducts due to their high value and the fact that they are rich in bioactive compounds and nutritional components.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
