Postharvest Storage Techniques and Quality Evaluation of Fruits and Vegetables

Message from the Guest Editors

Dear Colleagues,

Fruits and vegetables are marketed in a variety of colors, shapes, flavors, aromas and textures, but their full nutritional importance has only been explored and recognized recently. Losses in produce have always been a limitation for modern agriculture. The magnitude of postharvest losses in fresh produce is estimated to be 5% to 25% in developed countries and 25% to 50% in developing countries. This enormous waste of fresh food poses a significant economic, social and ecological burden on humanity and thus there is an urge to improve current practice and to develop new means to reduce it. Technological advances like the online monitoring of the environment or the produce state, and the active modulation of storage conditions, in parallel with increased public awareness of food quality introduce both opportunities as well as challenges to the field. In this Special Issue, we welcome original research, reviews and opinions concerning recent insights, approaches, and advances in the pre- and postharvest handling of perishable fresh produce aiming to preserve its quality and reduce losses.
Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

**Open Access:**—free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** Indexed in the Science Citation Index Expanded (SCIE) - Web of Science from Vol. 5 (2015). Covered in *Scopus* (2019 CiteScore: 1.8) and other databases.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
