Deadline for manuscript  
submissions:

**closed (30 July 2015)**

### Message from the Guest Editor

Dear Colleagues,

Research over the last 5 years has established that biochars are redox active in soil, and that they are involved in numerous electron-shuttling reactions. These reactions are important in facilitating the modification of soil physical, biological, and chemical properties that impact soil fertility and structure, greenhouse gas emissions, contaminants, and agricultural productivity. This Special Issue calls for manuscripts that provide evidence to improve our mechanistic understanding of the redox reactions facilitated by biochar amendment. In particular, papers that explore the role of redox active minerals on the surface of biochar are encouraged.

Dr. Lukas Van Zwieten

## Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
